

Essay Form

Student Name:

WAYN ICAW MOOY

(6)

Country:

MYANMAR

Theme:

The roles of my country and of Asia in the future.

Length:

Maximum of 1,000 words

Language:

English

Asia is the vast covering dozens of countries and societies, different political systems and various stages of developments. And also, my country, Myanmar, is one of the Asian countries. With many events and cooperation with the other countries, all of the Asian countries try and also hope for the bright future of the world. So, every citizen should have their own roles and duties for our earth.

In my country, Myanmar, some specific targets have been identified to implement the future plans. Because of being situated politically and militarily at the strategic point for all countries in Asia and my country is the 25th most populated country in the world. Even my country have many natural resources like jode, gold, ruby, natural gas, oil, teak and black pearls, without enough technologies, we cannot produce the advanced electronic things. Although Tapan, prime for all Asian countries, have not enough resources but they have powerful technologies to develop their own country and the world.

My country produces the electronic energy from water energy and source. But now my country has not enough water energy. So, we use the generators which work with oil and disel. The natural gas has to keep about million with oil and disel. The natural gas has to keep about million years consequently now people keep only for 200 years and they overuse it. Limited and boundary scurce also occur

in my country other developed countries like Japan and China, they use various kinds of energies like geothermal, nuclear, solar, for further energies. But they need to protect the environment. As Myanmar, we cannot provide technologies to the world. We can only preserve our natural resources. Firstly, my country needs to protect the deforestation because only 30% of the forests remain by planting trees, we can protect the air pollution and global warming which is one of the most dangerous things the earth faces.

We are in the middle of a worldwide change in technologies. Popular etechnology systems have crossed borders in ways we have never seen before. According to social scientists, our world is shrinking. But the shrinking world faces with many problems. According to the increase of popullation, we need many problems. Then, because of poisonous gas, air pollution occurs and industries. Then, because of poisonous gas, air pollution occurs and effects human's health. For the living standard like house, work and official buildings, we mostly use wood. It causes work and official buildings, we mostly use wood. It causes deforestation because of this, the weather changes seriouslay and deforestation because of this, the weather changes seriouslay and the causes global warming. These are the problems that all the countries face with. We should have roles to protect these countries face with. We should have roles to protect these

Nowadays, the electronic categories are really essential in every event. People have commercial and cultural and commercial connections but these days computers internet, mobile phones and cheaper air transport have internet, mobile phones and cheaper air transport have internet and globalisation. With nuclear, we can use many be better air globalisation. With nuclear, we can use many energy sources. With the spaceships, we can visit and learn about the space atmosphere and iwe can find the ways to protect and develop air earth. But we must have limit. According to limitation, we work together and perticipate. According to limitation, we work together and perticipate for the future development of the world. The earth will be saved and developed. Our duty is to develop the world with the advanced technologies and good societies. To save the world from our inventions is also our duty.

In my country and also in the world, we face with violence for the religion problems. With over confidence on own religion, people against each other. If we have kindness and forgiveness, we can solve it. For example, taiko, traditional japanese drumming, brings together sound, body and mind. The energy from nature flows through the body of the drumsome taiko drummer, through the drumstick to the drum. Some taiko drummers have poin and tiredness, they feel the freedom. As drummers have poin and tiredness, they feel the freedom. As like that if we do something important and essential for like that if we do something important and essential for good things, we will face with many losses and problems. So, you must have strength to resist these. These strength may we must have strength to resist these. These things, we be our education and knowledge. Only with these things, we ton cross over the problems. Changes that can directly support the development of the nation will be made to the education system. So, my country starts to develop education system with other developed countries.

According to the above presentation, discussion and solutions to develop the future world, we must serve our own roles completely and perfectly. The most important our own roles completely and perfectly. The most important thing is to invent technologies and use for the countries thing is to invent technologies and use for the country for things. All countries try their best as like my country for the roles of the future world. The seven continents in the world serve and perticipate in many roles and the world serve and perticipate in many roles and the world serve and perticipate of disadvantages. This is solutions for both advantages and disadvantages. This is solutions for both advantages and disadvantages. This is the base thing for every role. I believe that the regional and global environment will rise up soon if we have unity. Myanmar also suppose every country all over the world to perticipate for the bright future of Asia and the world.
