

DAY-3 22<sup>nd</sup> March

## “Learning Global Issues”

### “Lessons from Logy&Nomy”

Thanks to Logy&Nomy, a game comes from Keio High School, we have conducted our Asian vision in 2040, which focuses mainly on: cooperation and creating a sustainable environment. Through the game, we have learnt the importance of working together as team leading us to a better result than working alone. As we helped each others, none of the countries got left behind and had slightly small gap between rich and poor. We could have won the game but the advisors got involved in and took our first place. Furthermore, we have found out that green and healthy earth is what we all want and this can be achieved through a conservative development.

### “Dreaming of a Unified and Empowered Asia”

Team Y celebrated World Water Day or rather their third day in the TYCA program by envisioning an efficient, sustainable and cooperative Asian community through advanced education, developed economies and preserved environments. During our stay in this program, we realized the gravity and the relation between the problems that each of our countries face, whether it be environmental or economic issues. Our group was exposed to the need to work together as a powerful unified Asia through lectures from Dr. Yamaguchi and Dr. Ishibashi and also through the enjoyable game of Logy&Nomy. Since then, we believed that finding the solution to the various obstacles we all share can only be discovered through developed, informed or educated and eco-friendly countries that help each other out.

### “Drawing the Prospective Asian Region ”

Our vision is to achieve sustainable economic development through technological innovation and regional cooperation to provide a healthy, stable quality of life and a safe environment to live in harmony while embracing diversity. To make our world better, we need economic growth but this progress should be sustainable so that we can preserve our resources for the future generations. To do this, technological innovation is important as it makes our lives easier and more convenient. Strengthened relationships, partnerships, and organizations are essential too for we need to help one another to attain a better society – a community wherein everyone will be able to live in unity.

### “SUSTAINABLE SOCIETY IN 2040”

On March 22, we discover that to achieve sustainable society, long-term policies should be established to encourage cooperation and partnership between nations so that we can preserve our legacy for the future generations. The reason why we choose this to be our vision is that if you take a close look at the status of the world at the moment, you can see that human have been gaining some brilliant achievements in the last few decades, which mean that human have already begun to head toward a sustainable society. Moreover, a new world is out there waiting to be explored. Therefore, we need to set out a solid vision to continue on the path of becoming a sustainable society.
