

TOSHIBA YOUTH CLUB ASIA

**TYCA VOL.3**

**FINAL REPORT**

**ACTION PLAN****MARCH**

- Share the experiences that I received with my classmates and friends.
- Plan an activity to represent about environmental awareness.

**APRIL**

- Made an activity in a camp (PSCN) which teach about how to recycle trash and teamwork.

## ACTION

I made an activity .The activity is design a boat made out of trash which the trash are milk boxes , bottles ,straws bottle cap and they can design it any design they want but it has to be able to float on water because they are going to use the boat to race with other teams.

“one man trash is another man’s treasure” they say .This activity not only teaches them about recycle but also teaches about the values of trash they have to win coins from games and use those coins to buy the trash .They have to work as a team to win each game.

The key to winning is working as a team , planning ,listening to others opinion and having fun together for me it might be just a small part of action but I believe that the kids will receive a wonderful experience and a have fun with new friends

## THANK YOU TYCA

From joining the TYCA camp vol.3 I have received many experience and knowledge and I was very inspired .I have become more aware in environment issues and have more leadership skills .I publicize about ways to save the environment and energy in the morning at my school. I am more confident I learn that sharing and listening and others opinion is important so before doing something I always exchange ideas and listen to their opinions. I also share the importance of separating trash and recycling in my school. These things might seem like just a small start but I believe that these small start can make a big difference. And even time past I believe I will not forget those wonderful moments in TYCA camp and things that I received. I will carry on and do more actions in the future.
