

EssayForm

Student Name:

Firdaow Sa-i

Country:

Thailand

Theme: The roles of my country and of Asia in the future.

Length: Maximum of 1,000 words

Language: English

Future is the time that never comes to us. Everyone wants a better way in the future but on one can predict the future clearly. Sometimes future becomes brutal and scary.

In 1945 Japan was destroyed by atomic bomb on Hiroshima and Nagasaki that cause the greatest pain to Japanese because Japan has lost nature resources and many people died .On the other hands , time Japance changed the severe suffer to be the thrust to develop their country. Apparently 20 years later, Japan become one of the top 5 developed countries.

As I'm a student, who's from three southern borders and I know that every country used to face same and everyone tried to forget it rather than change it to improve the country. In 1997 the economy of Thailand turned down and had less money in the world bank .During the same period the our king Bhumibol. Provided the guidelines to his subjects for instance under the name of royal projects the Sufficiency economy project Cha-Hua-Man royal initiative project, Khem Ling project or Chaipattana turbine project and so on. These projects are the remote view of the king to the population. Such as Doikham company is one of his project it was founded to developed his population coupled with technology through nature resources to get the maximum benefits. Even though, The King Bhumibol had passed away , The King will be seen as a stabilizing figure forever and his royal project will go forward beside Thai people for eternity.

Thailand and Asia is the perfect place than America and Europe because Asia is rich of nature resources and petroleum but this place have a lot of population too. If everyone uses a lot of resources and on one preserve it, one day it is depoilted our world. I don't know if one day human don't have resources to use, hoe they will live together.

Nowaday, the world go forward .Country has to develop following the changing world. Each In Asia, the growth in the technology is so fast and AI [Artificial Intelligence] is one of new technology in Asia. AI in Thailand and other countries in Asia have balanced growth with human , their countries will be interred from America and Europe and they will invest in their countries because every country in this world wants investment to develop the country and gain new innovation. but if AI and technology in Thailand and other countries in Asia are more than human it will have a problem, for example , the competition between human and AI unemployment rate and crime as well as if their countries have a lot of problems, they will develop more slowly than other countries in Asia

In the finally , if you want the best way to develop your country, you have to develop the children in your country because they are the largest power in your country. Now if they have different thinking than the past you have to develop them more because the children is the new hope for your country.
