

# TYCA FINAL REPORT

Name: Neungleuthai Chalernphon

Country : Laos

TYCA Vol. 3

Action Plan Title: Classification & Recycling Garbage at School\

Location: Donedu Primary School (there was some trouble contacting Vientiane High School as I said in the post assignment, so I chose this school instead)

Date: 20<sup>th</sup>-21<sup>th</sup> of July 2017

On the 20<sup>th</sup>-21<sup>st</sup> of July at Donedu Primary School (My local primary school) was the start of my action plan, as I and some of my friends who have helped me along the 2 days, started teaching children from grade 4-5 about the importance of the environment and why we must protect them (global warming, climate change), we taught them waste-sorting, other than that we also let them paint the garbage bins! To encourage them to pick up the rubbish and put it in the garbage bins that they painted. The students had so much fun with our sessions as we tried to involve as many activities as possible. The sessions were held after they finished their school (3pm) and our sessions and activities took about 2-2:30 hours (5-5:30 is finished)

And on the last day which was the 21<sup>th</sup>, we continued to give out the knowledge as usual but after the sessions were over we and the children all together pick and clean up the rubbish around the school. It was great to see that the children enjoyed our sessions and seeing the smiles on their faces was one of the best feeling ever even though it is such a short period of time.

Finally, I would like to thank TYCA, for making this fun, knowledgeable program for us young generations to plant changes for our community. And to see our community grow and become better and better.

My team teaching the children about color mixing and bins-painting
